

## 1. PROJECT OVERVIEW

- **Project Title:** FitBuddy - AI Workout Generator

## 2. TARGET AUDIENCE & PERSONA IDENTIFICATION

- **Target Audience:** IT professionals, college students, and beginners looking for structured fitness guidance.
- **User Persona:** "Rahul" - A 21-year-old student weighing 69 kg. He spends most of his day sitting at a desk and wants to achieve "Weight Loss" with a "Medium" intensity routine. He wants to get fit but feels intimidated by gym culture and complex workout jargon.

## 3. EMPATHY MAP BREAKDOWN

### What the User SAYS:

- "I want to lose weight, but I don't know where to start."
- "Personal trainers at the gym are way out of my budget."
- "I tried following a random YouTube workout, but it was too intense and I got injured."

### What the User THINKS:

- "Is this generic workout plan I downloaded actually safe for my current weight?"
- "I wish someone would just give me a clear schedule for Monday to Sunday."
- "I need an app that doesn't just track my steps, but actually tells me what exercises to do."

### What the User DOES:

- Downloads multiple generic fitness apps but uninstalls them due to hidden paywalls.
- Spends hours researching diets and exercises but suffers from "analysis paralysis."

- Often skips workouts because he doesn't have a structured plan for the day.

**What the User FEELS:**

- **Overwhelmed:** By the sheer volume of fitness advice on the internet.
- **Frustrated:** Because generic routines don't yield results.
- **Motivated:** Whenever he receives clear, step-by-step guidance tailored to his body.

**4. PAINS AND GAINS**

- **Pains:** High cost of personal training, confusion over exercise selection, and lack of daily structure leading to inconsistency.
- **Gains:** Instant access to a personalized 7-day schedule, zero financial cost, and clear, easy-to-follow daily tasks.
